College Course Offerings for High School Students

Highlights of the Report

2024-2025

Since the early 1990s, the Commission has reported on courses offered at distance by public institutions for students in Nebraska. Information on instruction for high school students was not initially collected; it was added in 1998-99. Due to the number and ubiquity of distance courses overall, as well as the importance of making college courses available to high school students, the Commission has chosen to collect information solely on distance courses offered for high school students.

Distance education enrollment information for fall 2013 through fall 2024 for all Nebraska institutions by student level, distance education status, and distance education location can be found on the Coordinating Commission's enrollment dashboard at ccpe.nebraska.gov/enrollmentdashboard.

Definitions

- Course Delivery Method
 - Traditional delivery—instructor and students are in the same time and place away from the campus; for example, a face-to-face class in a different town or a location in the community other than the campus.
 - Synchronous delivery—instructor and students are in the same time, but not the same place; for example, two way interactive video, where the instructor is in one location, sometimes in the high school or on the campus with students in a classroom, and delivers the course at the same time by video to other students at a “receiving” site or sites.
 - Asynchronous delivery—instructor and students are in a different time and place; for example, an online course where students work on their own and there is no specified time for the class as a whole to have contact with the instructor.
- Dual or concurrent enrollment

The courses counted in this report are frequently offered for both high school and college credit and are usually called “dual enrollment” or “dual credit” courses in Nebraska. Also included in this report are college courses offered in high schools for which students receive only college credit although they are still enrolled in high school. These are sometimes called “concurrent enrollment” courses. Students who live near a college campus or who elect to independently take an online course can also earn college credit. These students are not generally counted separately and, therefore, most are not reflected in the high school data presented here.

Numbers of Courses and Students

While the majority of dual credit courses are offered in high schools, there are several significant exceptions in the reported data: WSC, UNL, and all the community colleges except for WNCC included courses that were taught on a campus or center (Table I).

Table I
Number of Courses and Students (duplicated headcount) at Centers and Campuses, 2024-25

		# of Courses	# of Students
CCC	Columbus Campus	28	115
	Grand Island Campus	64	415
	Hastings Campus	29	56
	Holdrege Center	7	44
	Kearney Center	48	271
	Lexington Center	8	45
MCC	Fort Omaha Campus	113	555
	South Omaha Campus	78	454
	Elkhorn Valley Campus	30	245
	Applied Technology Center	37	326
	Fremont Center	17	84
	Sarpy Center	118	874
	Career Launch Center	23	292
MPCC	Broken Bow Community Campus	9	71
	Imperial Community Campus	4	17
	McCook Community College	135	96
	North Platte Community College	72	243
	Ogallala Community Campus	8	16
	Valentine Community Campus	4	5
NECC	Norfolk Campus	69	135
	College Center South Sioux	28	122
	O'Neill Extended Campus	16	98
	West Point Extended Campus	25	233
SCC	The Career Academy	293	2,071
	Lincoln Campus	24	155
	Other SCC locations	40	122
UNL	on campus	8	108
WSC	on campus	2	6

Numbers of Courses and Students, continued

Most of the numbers in Table I are similar to those reported in 2023-24, with one exception. MCC's Fremont Center reported 17 courses and 84 students in 2024-25 compared to 81 and 1,001 in the previous year. This discrepancy is likely due to a change in reporting practice: Fremont High School was not reported as a location in 2023-24, so all Fremont students were likely reported at the Center.

- All six community colleges, the three state colleges, and the University of Nebraska campuses (except for UNMC) offered courses to high school students in 2024-25 and the two years prior (Table II)
- In 2020-21 there were 4,686 college courses enrolling 43,694 high school students (duplicated headcount). The number of courses and students steadily increased over the following two years with a large jump in 2022-23. The number of courses increased by 25% over the 2021-22 figures and the number of students increased by 31%. The increase continued, although at a slower pace in 2023-24. For 2024-25 overall totals increased, but a few institutions' individual figures declined.
- The number of courses offered in the **university sector** increased over the three years in Table II. The total numbers for the university sector are largely driven by UNO.
- At the **state colleges** both the number of courses offered and the number of students served declined from 2022-23 to 2024-25, influenced primarily by drops in the numbers at PSC.
- For the **community college sector**, the number of students served as well as the number of courses increased over the three years represented in Table II with significant growth each year. Especially notable is the increase in the number of courses at NECC, SCC, and WNCC. All institutions enrolled more students in 2024-25 than in the previous year.

TABLE II
Summary of College Courses Offered to High School Students in Nebraska by Public Institutions, 2022-2025
(Duplicated course and headcount)

Institution	2022-23		2023-24		2024-25

Grand Total	5,964	64,293	6,375	70,419	6,975	77,950

*Includes courses at the Fremont Center, Applied Technology Center, Sarpy Center, Career Launch Center, and the Ft. Omaha, South Omaha, and Elkhorn Valley campuses.

** Includes courses at the Broken Bow, Imperial, McCook, North Platte, Ogallala, and Valentine Community Campuses

*** Includes courses on the Norfolk campus, at the O'Neill Extended Campus, at the West Point Campuses, and at the College Center at South Sioux City.

**** Includes courses at the Career Academy in Lincoln and other SCC facilities.

Distribution by Sector

The distribution of both courses and students gradually changed from 2020-21 to 2024-25 with an overall decline in percentages at both the university and state colleges. The opposite was true at the community colleges with the percentage of students increasing from 81% to 87% and the percentage of courses from 77% to 84% (Table III).

TABLE III

Distribution of Courses and Students

As a Percentage of Total Courses and Total Students

	2020-21		2021-22		2022-23		2023-24		2024-25	
	% of courses	% of students	% of courses	% of students	% of courses	% of students	% of courses	% of students	% of courses	% of students
University	14	15	13	10	10	12	10	12	10	12
State Colleges	4	8	4	7	4	6	4	5	3	4
Community Colleges	81	77	83	79	85	82	86	83	87	84

- Prior to 2015, the largest number of courses and students was reported by UNO. Much of UNO's success can be attributed to a partnership between UNO and the Omaha area high schools by which UNO faculty work with high school faculty so that Advanced Placement courses taught in high schools meet UNO requirements and are accepted for college credit.
- However, in 2015-16 the pattern began to change, with some of the community colleges exceeding UNO's numbers. In 2023-24 all the community colleges except MPCC and WNCC offered more courses than UNO (Table II). Of the other four community colleges CCC, MCC, and SCC also exceeded the number of students reported by UNO. The pattern held true for 2024-25.

Delivery Methods

The method of delivery varies significantly both by sector and by institution (Table IV).

- For distance education delivered to all students (not just high school students), asynchronous delivery is by far the most popular in all three sectors, while synchronous is the least used. Yet for offerings to high school students traditional delivery is still the most common. Since the Commission began collecting high school data, synchronous delivery has been the second most common and asynchronous the least. In 2017-18, however, asynchronous delivery surpassed synchronous, a pattern that continued through 2024-25 and is likely to persist.
- This pattern is reflected in the numbers in Table IV and the percentages they represent. Asynchronous delivery was utilized for 29% of all courses offered for high school students in 2022-23, up from 16% in the previous year. In 2024-25 it had risen to 31%. While traditional delivery was still the delivery method of choice, it represented 67% of the courses in 2022-23, 68% in 2023-24, and 66% in 2024-25. This was down significantly from the 80% in 2021-22.
- Synchronous delivery was previously used heavily by the community colleges due, in part, to dual enrollment courses offered to high school students at their high school building. Improving the ability of colleges to offer synchronous courses to K-12 schools was the goal of LB 1208, passed in 2006. The bill provided for improvement in connectivity statewide and offered incentives for K-12 schools to participate in distance delivery.
- LB 1208 did greatly improve connectivity in the state but did not result in a significant increase in the number of synchronous courses offered by the community colleges. In all three years shown on Table IV, the community colleges were the only institutions reporting synchronous delivery for high school students.
- For the three years on Table IV UNO and UNK offered all of their courses for high school students traditionally. NCTA offered their courses for high school students entirely as asynchronous courses, while UNL offered both, but primarily asynchronous courses.
- The state colleges previously offered courses for high school students relying heavily on traditional delivery, with a few courses offered asynchronously. In 2022-23 and the two subsequent years CSC reported courses utilizing only traditional delivery while PSC and WSC, also heavily invested in traditional delivery, provided a small number of asynchronous courses.

TABLE IV
Number of Courses Offered to High School Students by Delivery Method, 2022-2025

Institution	2022-23				2023-24				2024-25

*Includes courses at Fremont Center, Applied Technology Center, Sarpy Center, Career Launch Center, and the Ft. Omaha, South Omaha, and Elkhorn Valley campuses.

**Includes courses at the Broken Bow, Imperial, McCook, North Platte, Ogallala, and Valentine Community Campuses except for 2023-24.

***Includes courses on the Norfolk campus, at the O'Neill Extended Campus, at the West Point Campuses, and at the College Center at South Sioux City.

****Includes courses at The Career Academy in Lincoln and other SCC facilities.

Subject areas

Almost every type of course is offered to high school students. Table V identifies the disciplines in which the courses were offered, using the Classification of Instructional Programs (CIP) code developed by the National Center for Education Statistics. Shaded areas indicate the largest number of courses in the sector.

- Of special note is the tradition of the community colleges to report the vast majority of their academic transfer courses (e.g., English, science, math, and social science) under Liberal Arts and Sciences (CIP 24), which therefore represents a wide range of courses. This tradition results in Liberal Arts and Sciences being the discipline with the most offered courses.
- Liberal arts and sciences courses are also the kinds typically offered by the four-year institutions. The most offered courses in the state college sector as well as the University of Nebraska were in math. The next most offered courses were in physical science and social science in the university sector and education in the state colleges, the latter reflecting the history of the state colleges as normal schools. English Language and Literature has ranked in the top two for many years and is third this year at the state colleges. It is logical that these courses would be popular for high school students as they are often courses that fulfill general education requirements at both two-year and four-year institutions. They are also the courses most likely to be accepted in transfer from one institution to another.
- Beyond the liberal arts and sciences courses, the community colleges focused on the technical and career training that is primary in their role and mission.
- Table VI shows the course offerings by institution within the community college sector, the sector providing the largest number of courses to high school students. Except for MPCC, all the colleges offered courses in at least a dozen different fields. After liberal arts and sciences the largest number of courses was in the health professions, offered at all six institutions. Also available at all the community colleges were courses in business (the third most offered discipline) and precision production (the fourth most offered discipline). Information sciences and mechanic and repair courses were also popular offerings.

TABLE V
High School Course Offerings by Discipline (CIP Code) and Sector 2024-25

CIP Code	Description	University of Nebr	State Colleges	Community Colleges	Total
1	Agriculture	10		116	126

Total	1,092	2,185	494	917	894	482	6,064

Shaded areas indicate the largest number of courses per college excluding CIP 24.

Accessibility

Accessibility is often thought of in terms of location. Students in rural areas, for example, may not have courses provided at their high school due to the remote location. However, students should also have access to a *variety* of courses. For example, if English Comp I is offered every semester but English Comp II is rarely or never offered, an individual student is not able to take full advantage of college enrollment.

Accessibility: Course Variety

- Table VII is a summary of all courses offered by all institutions more than 10 times in 2024-25. Eighteen courses were offered at least 20 times at one institution and also offered by at least one additional institution. This is 11 more than in 2017-18 (Table VIII).
 - Applied Statistics was added in 2018-19 and three other courses were added in 2019-20: Analytic Geometry/Calculus I, American Government, and Late American History (also called U.S. History Since 1865 or American History II).
 - Two new courses were added in 2020-21: Introduction to Literature and Early American History (also called U.S. History Before 1865 or American History I).
 - Making their first appearance in 2021-22 were Intermediate Spanish II and Finance/Financial Literacy. The latter was likely the result of the Financial Literacy Act, requiring a course in personal finance or financial literacy for high school graduation in Nebraska, that went into effect in August 2021.
 - In 2022-23 Technical Math and General Biology were added to the list.
 - In 2023-24 Intermediate Spanish dropped off the list but was replaced by Introduction to Sociology and Medical Terminology. No new courses were added to this list in 2024-25.
- College Algebra and English Comp I were the most offered courses in all eight years, although in 2023-24 College Algebra dropped to a level just greater than that of 2020-21 (Table VIII). It rebounded in 2024-25.
- More courses were offered overall, but mild fluctuations occurred with some disciplines decreasing slightly in number of courses.
- Within the list of courses offered at least 11 times there is a wide variety of topics, ranging from Blueprint Reading to Human Anatomy and Physiology (righthand columns of Table VII).
- Three courses were offered at least 11 times in 2024-25 that had not been offered previously (or offered less than 11 times and not included in earlier reports): Accounting III, Brakes/Steering/Suspension/Tires, and Introduction to Medical Law and Ethics.

*No courses meeting criteria in this year

Accessibility: Course Location

- Asynchronous courses can be accessed from almost any location across the state. Therefore, the institutions sometimes do not report locations for students taking courses asynchronously.
- Table IX lists the locations reported by the institutions. The state is well covered, especially when low population areas are taken into consideration. Simply as a means to organize the data, the locations are grouped by community college area. Courses offered at a location within the community college area are enumerated by the sector offering the course. Because institutions may offer courses outside their geographic service area (with permission from the Coordinating Commission), a number in any of the columns does not necessarily mean that the closest institution provided all the courses.
- Students in the state's larger cities naturally have more opportunity for dual enrollment courses.
 - 59 courses were offered in Grand Island (Grand Island High School and GI Northwest), 37 at North Platte High School, 61 at Norfolk High School, 68 in Columbus (Columbus High School and Lakeview), and 234 at Scottsbluff High School.
 - Of the 234 courses at Scottsbluff, 230 were from WNCC and represent 48% of all courses offered for high school by WNCC, a result of the vigorous career academy program at Scottsbluff High School.
 - Southeast Community College offered 293 courses at The Career Academy in partnership with Lincoln Public Schools. This is a substantial increase from the 186 courses offered in 2023-24. In addition, SCC provides courses at the various high school locations in Lincoln, including 26 at Northeast High School.
 - Metro Community College offered 235 courses at Millard South High School, part of MCC's Early College program whereby students can earn a high school diploma as well as an associate degree. 3,683 students were served in the program. Another 25 courses were offered by the University of Nebraska at Millard South.
 - A large number of courses were available in Omaha but do not appear as a single figure because the institutions report separately for all the individual public and private high schools in the Omaha metro area. MCC offered a total of 2,185 courses, 416 of which were in their centers or on campus. In addition to Millard South, MCC provided 54 courses at Blair High School, 50 at Gretna High and 51 at Gretna East, 68 at Fremont High School, 32 at Millard Horizon High School, and 39 each at Bellevue East and Westside High Schools. The University of Nebraska system offered 578 courses in the Omaha metro area, including 53 at Omaha Central High School, 35 at Millard West, 32 at Millard North, and 31 at Creighton Prep. This is by far the largest number of university courses offered in any of the areas in the state. The Nebraska State College System also provided 28 courses in the Omaha metro area.
- Small communities, of course, have fewer opportunities, but the institutions do reach them. Towns such as Wynot (population 218), Nelson (population 456), Maxwell (population 310), and Big Springs (population 394) each had at least two courses offered in 2024-25.

- The total number of locations in which courses were offered in 2024-25, as reflected in Table IX, was 333. This figure represents dramatic growth. In 2014-15, the first year locations were reported, the institutions listed 215 communities, districts, and schools where courses were delivered to high school students.
- In addition, few locations offered more than one or two courses in 2014-15. The exceptions were Omaha Public Schools with 17, Millard Public Schools with seven, Lincoln Public Schools and Omaha Catholic schools with six each, and four each at Papillion LaVista and Elkhorn.
- What the tables in this report do not show is which courses were offered in which locations. Table V lists the number of courses in every discipline while Table IX shows the locations, but the two aren't linked. For example, Table IX may show a location with four courses. That could represent four different courses, one course offered four times, or some combination of offerings. With additional time and staff, this data could be extracted and reported.
